

Chaitanya Andhale

+91 9209591382 — chaitanyaandhale6@gmail.com — LinkedIn — GitHub — Portfolio

Professional Summary

Java Backend Engineer with practical experience building REST APIs with Spring Boot. Strong knowledge of data structures, database optimization, and secure authentication systems. Skilled in developing modular server-side applications that support scalable and maintainable software solutions.

Technical Skills

Programming: Java, JavaScript, SQL, Python

Backend: Spring Boot, Node.js, Express.js, Hibernate, JDBC, REST API Development

Databases: MySQL, MongoDB, Indexing, Query Optimization

Security: JSON Web Token authentication, Access Control Implementation

Frontend: React.js, Bootstrap, Responsive Design

Tools: Git, GitHub, Postman, VS Code, Eclipse

Concepts: Data Structures, Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Agile

Engineering Experience

Software Engineer Trainee — QSpiders

2024

- Created backend components in Spring Boot based on layered architectural principles.
- Integrated more than ten REST endpoints to manage structured data transactions.
- Decreased database response time by 25% after improving indexing and query performance.
- Strengthened API reliability by adding validation checks and structured exception handling.
- Supported sprint execution through development, testing, and deployment activities.

Projects

Golegaon Digital Gram Panchayat

Live — GitHub

- Developed a digital governance platform that provides bilingual content for village users.
- Secured administrative access through role-level authorization and authenticated database sessions.
- Configured real-time database updates with defined validation rules.
- Hosted the production build on Vercel with stable deployment configuration.

Car Rental Management System

GitHub

- Built a service-layer application that manages booking workflows and more than one hundred transactions.
- Designed pricing calculations to ensure accurate billing operations.
- Enhanced processing efficiency through optimized Java collection handling.
- Maintained structured code organization to support scalability.

E-Commerce Platform

GitHub

- Implemented REST endpoints to handle product browsing, cart operations, and order processing.
- Applied secure session management with token-based authentication.
- Improved database query efficiency by restructuring MongoDB collections.
- Ensured consistent API responses with centralized error management.

Crop Disease Detection System (Academic Project)

GitHub

- Trained a convolutional neural network on 32,000 plant leaf images for disease classification.
- Applied image preprocessing techniques including normalization and augmentation.
- Evaluated model performance using accuracy and validation metrics.
- Automated prediction workflow for crop disease identification.

Education

Bachelor of Engineering in Computer Science
Savitribai Phule Pune University
CGPA: 7.92

2021 – 2025
